

ComicCraft – Finalized Decisions & Immediate Actions

Based on the finalized ComicCraft project prompt and the previous decision to add the project team names.

Finalized Decisions

Project	ComicCraft – AI Comic Story Creator
Team Members	Bharathi, Gopinath, Naveen Kumar, Shyam
Main Goal	Build a complete Python-based web application that generates personalized comic stories, illustrations, and PDFs.
Backend	Python 3.11+, FastAPI + Uvicorn
AI Story Generation	Google Gemini API
Image Generation	Hugging Face Diffusers / Stable Diffusion
Image Processing	Pillow
PDF Generation	ReportLab
Frontend	HTML, CSS, JavaScript
Configuration	python-dotenv with API keys stored in .env
Development Support	Include development/mock mode so the project can run without a powerful GPU.

Immediate Actions

1. Create an empty ComicCraft project folder in Visual Studio Code.
2. Create the required app, services, static, generated, configuration, and documentation files.
3. Set up the Python virtual environment and install the requirements.
4. Configure the Gemini API key through .env using .env.example as the template.
5. Implement the FastAPI routes for health check, story generation, comic creation, panel regeneration, and comic retrieval.
6. Implement Gemini structured JSON generation and Pydantic validation.
7. Implement image generation with development/mock mode support.
8. Implement PDF generation with title, summary, panel images, narration, dialogue, and page numbers.
9. Build the responsive comic-book frontend with Generate, Regenerate Panel, Download PDF, and New Comic actions.
10. Run and verify the complete application at <http://127.0.0.1:8000>.

Project Team

- Bharathi
- Gopinath
- Naveen Kumar
- Shyam

Source basis: ComicCraft project prompt supplied in the conversation. The prompt specifies the technology stack, features, project structure, API endpoints, security requirements, documentation requirements, and run instructions.
